

AMENDMENTS TO THE CLAIMS

Claims 1-38 (Cancelled).

39.(New) An information media with at least a track,
said media having a wobbled groove formed along the track,
said wobbled groove containing positive marks formed in a specific plurality of a predetermined unit length; and negative marks formed in a different specific plurality of a predetermined unit length, said positive and said negative marks being used for presenting position information of said track in the information media.

40.(New) An information media as claimed in claim 39,
wherein said positive mark is indicated by a groove section, in which the wobbling of the groove - compared to a sinusoidal wobbling - contains a steeper outward inclination, and said negative mark is indicated by a groove section, in which the wobbling of the groove - compared to a sinusoidal wobbling - contains a steeper inward inclination.

41.(New) An information media with at least a track,
said information media having a wobbled groove formed along the track,
said wobbled groove containing positive marks formed in a specific plurality of a predetermined unit length;
wherein a positive mark is indicated by a groove section, in which the wobbling of the groove - compared to a sinusoidal wobbling - contains a steeper outward inclination, and
wherein said positive marks are used for presenting position information of said track in the information media.

42.(New) An information media with at least a track,
said information media having a wobbled groove formed along the track,
said wobbled groove containing positive marks formed in a specific plurality of a
predetermined unit length;
wherein a negative mark is indicated by a groove section, in which the wobbling of the groove
- compared to a sinusoidal wobbling - contains a steeper outward inclination, and
wherein said negative marks are used for presenting position information of said track in the
information media.
